

Minuteman Service Programs

From Setup to Support, Minuteman Powers Your Peace of Mind with Seamless Service.

Reviewing the site location ensures compatibility with environmental requirements, building restrictions, and access points, preventing last-minute issues. **Delivery requirements**, including on-site assistance and freight arrangements, are assessed for smooth installation. Confirming product **delivery date** and shipping logistics avoids delays and extra charges. Verifying **electrical infrastructure** and **equipment compatibility** prevents costly changes. Coordinating **scheduling arrangements** with all parties minimizes labor and installation costs. Minuteman guarantees installation and covers any additional costs if conflicts arise after the survey, ensuring a seamless process and customer satisfaction.

Pre-Installation
Site Survey

Minuteman's service verifies **proper site installation** by confirming the unit's location matches the site survey, checking environmental conditions, and ensuring optimal UPS placement. The **infrastructure** is reviewed to prevent conflicts and dangerous conditions, verifying utility **connections** and site capacities. All input and output connections are confirmed correct, ensuring connected devices are properly plugged in and within operational parameters. The UPS is then **powered on and optimized** for full efficiency, with all connected devices inspected. Finally, Minuteman **extends the standard product warranty by an additional year** for customer peace of mind.

Minuteman offers efficient, drop-in, plug-and-play power quality solutions tailored to diverse infrastructure needs. Our custom configuration services include pre-configuring a suite of products, from UPS to PDUs, for **easy installation**. We provide full-height and half-height **power cabinets** that can be customized with UPS systems (5kVA to 10kVA), additional battery packs, step-down transformers, and accessory items like PDUs and communication options. **Configuration services extend to custom UPS setup**, allowing users to customize settings such as input/output voltages, load control, SNMP communication, and managed PDU setup, ensuring a seamless and reliable power solution.
