

5 Signs Your UPS Battery Needs To Be Replaced

Your UPS protects critical equipment when power problems occur, but UPS batteries have a limited service life.

Need help evaluating your battery? Connect with the Minuteman team at sales@minutemanups.com

1 BATTERY AGE

UPS batteries have an average service life of 3-5 years. Review battery age and replacement recommendations proactively.

2 REDUCED RUNTIME

Runtimes under 8 minutes during outages or battery tests may indicate declining battery capacity.

3 BATTERY ALARMS

Frequent battery warnings or alarms should be investigated rather than ignored.

4 PHYSICAL CHANGES

Swelling, leaking or corrosion can indicate a problem requiring immediate attention.

5 FAILED SELF-TEST

A failed battery test can indicate that the UPS battery is no longer performing as expected.
